Contract Account

Definition

Structure element of [ContractAccountsReceivableandPayableProcessing](#) for entering and reporting all receivables and payables of one or more companies to one or more business partners. Contains guidelines and agreements with one or more business partners with regard to payments, dunning, interest calculation, and tax calculation for receivables and payables.

Technical Data

Entity Type	Business Object
Technical Name	ContractAccount
Object Category	Master Data Object

Business Context and Use

This business object enables you to create and manage contract account master data. In [Contract Accounts Receivable and Payable](#) (FI-CA), each business partner-relevant posting is assigned to one business partner and to one contract account.

The contract account master record stores business partner-specific procedures that are used for posting and processing the line items of a given contract account. This includes specifications for payments and dunning, for example.

This business object enables you to query the items of a contract account. Used in the Utilities Industry it contains the following service operations:

- Service interfaces:
 - Query Contract Account In
- Operations:
- Find Contract Account by Business Partner

Credit Commitment In

Definition

The Credit Commitment In inbound service interface contains an operation that queries credit commitments.

Technical Data

Entity Type	Service Interface

Find Credit Commitment by Debtor

Definition

To find a debtor’s credit commitment information.

Technical Data

Entity Type	Service Operation
Release State	released
Technical Name	CreditCommitmentQuery_In
Namespace	http://sap.com/xi/FICA/Global 
Application Component	FI-CA
Web Service Definition (Back End)	CREDITCOMMITMENTQUERY_IN
Category	SAP A2A
Direction	inbound
Mode	synchronous
Idempotency	no
Change/Update Behavior	not applicable
P2P Communication Enabled	true

Business Context and Use

This inbound service operation receives requests for updates to a debtor's current credit commitments.

Related Operations

The [Query Credit Commitment by Debtor](#) outbound service operation is sent by the SAP Credit Management process component to the system Contract Accounts Receivable and Payable is running in to request the information.

Features

The **Find Credit Commitment by Debtor** operation receives requests made from your credit management system to the system Contract Accounts Receivable and Payable (FI-CA) is running in for the latest information about a debtor’s current credit commitments. The system uses the debtor’s credit exposure to determine the result.

This operation uses the following message types:

Credit Commitment Query

This operation is for finding credit commitment information. For further details, see [Credit Commitment Query](#) in SAP A2A.

9/29/26, 9:48 AM

The response contains a business partner's existing payment obligations (commitments). Contract Accounts Receivable and Payable transfers the following information:

- CreditSegmentInternalID
- TypeCode
- DebtorParty
- Amount
- SecuredAmount
- UnsecuredAmount
- ValidityDate
- AmountBalanceIndicator
- AmountDifferenceIndicator
- AccountingDocumentReference
- PendingCommitment

Credit Commitment Response

The response contains a business partner's existing payment obligations (commitments). Contract Accounts Receivable and Payable transfers the following information:

- CreditSegmentInternalID
- TypeCode
- DebtorParty
- Amount
- SecuredAmount
- UnsecuredAmount
- ValidityDate
- AmountBalanceIndicator
- AmountDifferenceIndicator
- AccountingDocumentReference
- PendingCommitment

Message Types

- Credit Commitment Query
- Credit Commitment Response

If you want to use the service operation in the FI-CA system, you must activate the integration with SAP Credit Management in Customizing for Contract Accounts Receivable and Payable under [Integration -> Financial Supply Chain Management -> Credit Management -> Activate Credit Management](#) .

Enhancements

You can use FI-CA event 4615 to enhance the proxy structure of this operation.

Credit Rating In

Definition

The Credit Rating In inbound service interface contains an operation that receives credit ratings.

Technical Data

Entity Type	Service Interface
Category	SAP A2A
Direction	inbound

Respond Credit Rating Query

Definition

To receive debtors' credit ratings.

Technical Data

Entity Type	Service Operation
Release State	released
Technical Name	FICARatingReplicateResponse_In
Namespace	http://sap.com/xi/FICA 
Application Component	FI-CA
Web Service Definition (Back End)	FKK_RATINGRPLCTRP
Category	SAP A2A
Direction	inbound
Mode	asynchronous
Message ID	...

Business Context and Use

This inbound service operation receives a business partner's credit rating, calculated and sent by your credit management system, to your contract accounting system.

Related Operations

The [Respond Credit Rating Query](#) outbound service operation sends the requested information from the Credit Management process component.

Features

The Respond Credit Rating Query inbound service operation provides the credit rating and the credit risk class for the requested party.

Error Handling

Forward Error Handling

The Respond Credit Rating Query inbound service operation supports Forward Error Handling (FEH). The following error categories are used:

- DCE: Determination & Conversion Error
- PRE: Processing Error

For more information about the individual error categories, see the code list for the global data type `LogItemCategoryCode`.

Message Types

- FICA Rating Replicate Response

Notes on SAP Implementation

The software component CA-SOA-ESM-ERP-FIN and business process CREDAGY001 are used to support forward error handling.

The inbound proxy implementation updates the following data in the Contract Accounts Receivable and Payable:

- Credit rating as sent from Credit Management (Table DFKKCRH)
- Credit Management Master Data (Table DFKKCMS)
- Trigger for a change to Contract Accounting after a change to Credit Management master data. (You use the trigger(s) in the mass activity transaction FPBPCU).

The `ValidityPeriod` of the `CreditRiskClass` is not supported.

Enhancements

You can use the FI-CA event 4602 to enhance the Credit Management master data. You can also use this event to enhance the CI-CA event 4602 to enhance the Contract Accounting master data. For more information, see the SAP documentation for event 4602.

Credit Rating Out

Definition

The Credit Rating Out outbound service interface contains an operation that sends and queries credit ratings.

Technical Data

Entity Type	Service Interface
Category	SAP A2A
Direction	outbound

Query Credit Rating

Definition

To send debtors' credit ratings that are calculated in contract accounting.

Technical Data

Entity Type	Service Operation
Release State	released
Technical Name	FICARatingReplicateQuery_Out
Namespace	http://sap.com/xi/FICA 
Application Component	FI-CA
Category	SAP A2A
Direction	outbound
Mode	asynchronous
Idempotency	not applicable
P2P Communication Enabled	yes

Business Context and Use

This outbound service operation sends debtor's credit rating information from your contract accounting system to the requesting component.

Related Operations

The [Respond Credit Rating Query](#) retrieves the credit rating information from the SAP Credit Management component.

Features

The [Query Credit Rating](#) outbound services operation sends the debtor's rating that is calculated in contract accounting to the SAP Credit Management process component. This operation also requests the credit rating calculated in SAP Credit Management.

Message Types

- FICA Rating Replicate Query

Notes on SAP Implementation

This outbound service operation is called from the following transactions in the contract accounting back-end system:

- **Replication of Score (FPCM2)**: The calculated rating of the debtors is sent asynchronously to the Credit Management system. The Credit Management system returns the overall credit rating of the debtors to the contract accounting system asynchronously.
- **Preparation of Master Data Change (FPBPCR)**: The calculated rating of the debtors is sent asynchronously to the credit management system. The credit management system sends back the credit management master data that is relevant for a later change of the contract account master data (with transaction **FPBPCU**).

To enhance the proxy structure of this operation you can use the FI-CA event 4612.

Configuration

You need to activate the integration with credit management before you can use the contract accounting transactions to send the outbound service operation. You can do so in Customizing for Financial Accounting under Financial Supply Chain Management -> Credit Management -> Activate Credit Management

Debt Recovery Score Processing In

Technical Data

Entity Type	Service Interface
Category	SAP A2A
Direction	inbound

Response Debt Recovery Score By Debtor Party

Definition

To receive the debt recovery score for a debtor.

Entity Type	Service Operation
Release State	not defined
Technical Name	CreditAgencyReportERPDebtRecoveryScoreByDebtorPartyResponse_In
Namespace	http://sap.com/xi/FICA/Global2 
Application Component	FI-CA
Category	SAP A2A
Direction	inbound
Mode	asynchronous
Idempotency	not applicable
Change/Update Behavior	Type1
P2P Communication Enabled	no

Business Context and Use

The debt recovery score can be used to determine whether items of a business partner should be submitted to an external collection agency or a legal dunning system.

The inbound service operation [Response Debt Recovery Score By Debtor Party](#) can be used to update the debt recovery score for the relevant business partners. The actual submission of the items can then depend on this debt recovery score.

Features

The inbound service operation [Response Debt Recovery Score By Debtor Party](#) updates the debt recovery score for the specified business partner(s).

To determine the debt recovery score of business partners specify the business partner numbers.

Error Handling

Forward Error Handling

The inbound service operation [Response Debt Recovery Score By Debtor Party](#) uses [Forward Error Handling](#) (FEH) . The classified error category is [Determination & Conversion Error](#) . In case of such an error, the entire inbound service operation fails and no updates are executed. You can then repeat the processing or discard all information.

Message Types

- CreditAgencyReportERPDebtRecoveryScoreByDebtorPartyResponse

Debt Recovery Score Processing Out

Entity Type	Service Interface
Category	SAP A2A
Direction	outbound

Query Debt Recovery Score By Debtor Party

Definition

Requesting the debt recovery score for a debtor

Technical Data

Entity Type	Service Operation
Release State	not defined
Notes on Release State	
Technical Name	CreditAgencyReportERPDebtRecoveryScoreByDebtorPartyQuery_Out
Namespace	http://sap.com/xi/FICA/Global2 
Application Component	FI-CA
Category	SAP A2A
Direction	outbound
Mode	asynchronous
Idempotency	not applicable
Change/Update Behavior	not applicable
P2P Communication Enabled	no

Features

The debt recovery score gives an assessment of the probability that overdue payments for a collection case assigned to a collection agency can be collected. It is a separate rating value in addition to the creditworthiness rating (score) from external credit agencies.

The outbound service operation [Query Debt Recovery Score By Debtor Party](#) initiates the query for the debt recovery score for one or more specified business partners.

The debt recovery score can be used to decide whether to submit items of a business partner to an external collection agency or to a legal dunning system. The outbound service operation [Query Debt Recovery Score By Debtor Party](#) can be used to request the debt recovery score in a preliminary step of the actual submission (for example during the release of items or during the dunning of items by means of a dunning activity). The debt recovery score can then be used during the actual submission of the

Message Types

- CreditAgencyReportERPDebtRecoveryScoreByDebtorPartyQuery

Notes on SAP Implementation

Processing

You need to activate the use of the debt recovery score in Customizing of [Contract Accounts Receivable and Payable](#) under [Business Transactions -> Submit to Collection Agency -> Define Specifications for Debt Recovery Score](#) .

Enhancements

You can enhance this service operation by using the event concept in Contract Accounts Receivable and Payable. In event 6252, you can fill customer-specific fields in the outbound message used to request the debt recovery score. These fields are included in the message type using a data type enhancement.

Manage Contract Account In

Definition

Request to and confirmation from contract account for provision of contract account data.

Technical Data

Entity Type	Service Interface
Category	SAP A2A
Direction	inbound

Business Context and Use

The inbound service interface [Manage Contract Account In](#) groups operations that read information from the system which is relevant for the contract account.

Change Contract Account based Credit Worthiness Change Information

Definition

To receive information about a change to a debtor's creditworthiness.

Technical Data

Technical Name	CreditWorthinessChangeInformation_In
Namespace	http://sap.com/xi/FICA/Global 
Application Component	FI-CA
Web Service Definition (Back End)	FKK_CREDITWORTHINESSCHGIN
Category	SAP A2A
Direction	inbound
Mode	asynchronous
Idempotency	not applicable
Change/Update Behavior	Type1
P2P Communication Enabled	yes

Business Context and Use

The system displays the previous and new values to show you exactly how the debtor's credit worthiness rating has changed.

Related Operations

- This inbound service operation has a corresponding outbound service operation [Inform of Credit Worthiness Change](#) for the integration with the SAP Credit Management process component.

Features

The **Change Contract Account based Credit Worthiness Change Information** inbound operation receives information from the SAP Credit Management component. This is sent when a debtor's creditworthiness rating changes. This helps you to ensure that your creditworthiness information is as up to date as possible

The services operation receives the following data:

- Rating
- Credit limit
- Risk class
- Blocking indicator and its reason code
- Result of a performed credit check

Error Handling

Forward Error Handling

The **Change Contract Account based Credit Worthiness Change Information** inbound operation supports Forward Error Handling (FEH). The following error categories are used:

For more information about the individual error categories, see the code list for the global data type `LogItemCategoryCode` .

Message Types

- Credit Worthiness Change Information

Notes on SAP Implementation

The `CA-SOA-ESM-ERP-FIN` component and the `CREDAGY006` business process are used to facilitate forward error handling.

After the inbound proxy is processed, a trigger is created to change the relevant Contract Accounting master data. This trigger is created once the changes have been made to the associated Credit Management master data. The changes made to the Contract Accounting master data are used in mass activity transaction `FPBPCU` in the Contract Accounting system. You can use the Financial Accounting (FI-CA) event `4603` to create your own triggers for master data change

Check Benefit Free Period

Definition

To determine whether benefit exemption exists for an insurance policy for a claim period, due to payments that have not been made.

Technical Data

Entity Type	Service Operation
Release State	released
Technical Name	InsuranceContractBenefitFreePeriodByInsuranceContractIDAndClaimPeriodQueryResponse_In
Namespace	http://sap.com/xi/FS-CD/Global 
Application Component	FS-CD
Web Service Definition (Back End)	INSURANCECONTRACTBENEFITFREEPE
Category	SAP A2A
Direction	inbound
Mode	synchronous
Idempotency	no
Change/Update Behavior	not applicable
P2P Communication Enabled	true

Business Context and Use

The **Check Benefit Free Period** operation provides information about benefit-free periods. Benefit-free periods occur for an insurance contract if open items with a due date in the past are dunned, for example, and dunning levels defined in Customizing are reached within the corresponding dunning procedure.

You can Use the **Check Benefit Free Period** operation in claim processing to check whether the insurer has to settle the claim or whether the insurer is benefit-free at the time where the claim happened due to missing payments from the customer.

Features

The selection is done by the Insurance Contract Reference ID element, which is the internal ID of the underlying insurance object in Collections/Disbursements. The operation returns the periods, in which the insurance contract was or is benefit-free.

Note:

The benefit-free periods are defined via dunning level categories. The dunning levels with dunning level categories 05 (benefit-free), 08 (legal proceedings - with automatic clearing), or 09 (legal proceedings - without automatic clearing) are regarded as benefit-free. The creation data of the dunning notice represents the start of the benefit-free period.

Error Handling

Error messages are returned in the error log.

Message Types

- InsuranceContractBenefitFreePeriodByInsuranceContractIDAndClaimPeriodQuery
- InsuranceContractBenefitFreePeriodByInsuranceContractIDAndClaimPeriodResponse

Prerequisites

You can only use the **Check Benefit Free Period** operation if the business function **SAP for Insurance: Collections/Disbursements 1** is active and if the dunning by dunning procedure for insurance companies is used.

Constraints

You can only use the **Check Benefit Free Period** if you use the dunning by dunning procedures for insurance companies.

Note that the start of the benefit-free period might be several days afterwards from a legal perspective, since it takes some days until the dunning letter reaches the customer and there might also be buffer for him to react.

Notes on SAP Implementation

Configuration

You set the relevant dunning level categories in Customizing for **Collections/Disbursements** , under **Business Transactions -> Dunning -> Dunning by Dunning Procedure -> Configure Dunning Procedure** . The dunning levels with dunning level categories 05 (benefit-free), 08 (legal proceedings - with automatic clearing) or 09 (legal proceedings - without automatic clearing) are regarded as benefit-free.

- Authority object F_KKDU, field FBTCH with value '03'
- Authority object F_KKKO_BUK, field BUKRS with value '*', field ACTVT with value '03'
- Authority object F_KKKO_GSB, field GSBER with value '*', field ACTVT with value '03'

Enhancements

To fill customer-defined fields you can use the V407 event.

Enhancements

To fill customer-defined fields you can use the V407 event.

Read Contract Account Payment Terms

Definition

To provide information on the payment conditions of a contract account.

Technical Data

Entity Type	Service Operation
Release State	released
Technical Name	ContractAccountPaymentTermsByIDQueryResponse_In
Namespace	http://sap.com/xi/FI-CA/Global 
Application Component	FI-CA
Web Service Definition (Back End)	FKK_CONT_ACC_PAYTERMSQR
Direction	inbound
Mode	synchronous
Idempotency	no
Change/Update Behavior	not applicable
P2P Communication Enabled	true

Business Context and Use

The inbound operation **Read Contract Account Payment Terms** provides information on payment conditions for a specified contract account.

Features

The response contains the payment terms (name and code) for the specified contract account.

Error Handling

Typical errors that may occur with this operation are:

- No contract account ID is specified in the query
- The contract account ID specified in the query is invalid

Message Types

- ContractAccountPaymentTermsByIDQuery
- ContractAccountPaymentTermsByIDResponse

Prerequisites

The user has to have the required authorization to read the specified contract account.

Notes on SAP Implementation

Prerequisites

You are using software component FI-CA (as of version FI-CA 6.02).

You have maintained the backend configuration of [SAP Biller Direct](#) in FI-CA (see Customizing for [Contract Accounts Receivable and Payable](#) under [Integration -> Financial Supply Chain Management -> Biller Direct -> Basic Setting for Customer Portal in Internet](#)). Note that since this operation is based on the functions of [SAP Biller Direct](#) , its use is subject to the same license conditions.

The user has sufficient authorizations, in particular with regard to authorization object F_KK_EBPP.

Processing

If an external contract account ID is specified in the query, it has to be mapped to the corresponding internal contract account ID. This mapping is carried out based on the definition of event 6600.

Payment Behaviour Summary In

Definition

The Payment Behaviour In inbound service interface contains an operation that queries payment behavior.

Technical Data

Entity Type	Service Interface
-------------	-------------------

Find Payment Behaviour Summary By Debtor Party

Definition

To find payment behavior information of a debtor.

Technical Data

Entity Type	Service Operation
Release State	released
Technical Name	CreditManagementAccountERPPaymentBehaviourSummaryByDebtorPartyQueryResponse_In
Namespace	http://sap.com/xi/FICA/Global2 
Application Component	FI-CA
Web Service Definition (Back End)	FKK_CMAPaymBehSummBDPQR
Category	SAP A2A
Direction	inbound
Mode	synchronous
Idempotency	no
Change/Update Behavior	not applicable
P2P Communication Enabled	true

Business Context and Use

This service operation queries information about the payment behavior of business partners from the system in which Contract Accounts Receivable and Payable (FI-CA) is running and sends the response to the Credit Management system.

Features

The response of the **Find Payment Behaviour Summary By Debtor Party** service operation transfers information about business partners' payment behavior to the Credit Management process component.

The following data is transferred:

- **DebtorPartyInternalID**
- **CreditSegmentInternalID**
- **CumulatedReceivablesAmount**

In the case of an error, the log of the service operation is filled with the corresponding error message.

Message Types

- CreditManagementAccountERPPaymentBehaviourSummaryByDebtorPartyQuery_sync
- CreditManagementAccountERPPaymentBehaviourSummaryByDebtorPartyResponse_sync

Notes on SAP Implementation

The PropertyValuation is filled with key figures from the system in which Contract Accounts Receivable and Payable is running.

Configuration

- Before you can use the service operation in Contract Accounts Receivable and Payable (FI-CA), you must activate the integration with SAP Credit Management in Customizing for Contract Accounts Receivable and Payable under [Integration](#) -> [Financial Supply Chain Management](#) -> [Credit Management](#) -> [Activate Credit Management](#) .
- If you want to transfer FI-CA key figures within the field PropertyValuation, you must activate the relevant key figures in Customizing for Contract Accounts Receivable and Payable under [Integration](#) -> [Financial Supply Chain Management](#) -> [Credit Management](#) -> [Key Figures](#) -> [Make Specifications for Key Figures for Credit Management](#) .

Enhancements

Enhancements

To enhance the proxy structure of the current operation, you can use event 4614 (see the documentation of sample function module FKK_SAMPLE_4614).

You can create your own key figures and send them to the Credit Management system. For more information, see the Customizing documentation under [Contract Accounts Receivable and Payable](#) -> [Integration](#) > [Financial Supply Chain Management](#) -> [Credit Management](#) -> [Key Figures](#) -> [Define Key Figures for Transfer to Credit Management](#) .

Query Contract Account In

Definition

Request to contract account for provision of contract account data.

Technical Data

Entity Type	Service Interface
Category	A2X
Direction	inbound

Find Contract Account Account Balance by Customer

Definition

To read the contract account balance of a specified business partner.

Technical Data

Entity Type	Service Operation
Release State	released
Notes on Release State	
Technical Name	ContractAccountAccountBalanceByCustomerQueryResponse_In
Namespace	http://sap.com/xi/FI-CA/Global
Application Component	FI-CA
Web Service Definition (Back End)	FKK_CONT_ACC_BALANCE_QR
Direction	inbound
Mode	synchronous
Idempotency	no
Change/Update Behavior	not applicable
P2P Communication Enabled	true

Business Context and Use

This inbound operation returns the current account balances of a specified business partner's contract accounts.

Features

The operation reads the balances of a specified business partner’s contract accounts. It finds open and due balance items as well as items that are 30, 60, or 90 days overdue.

The selection is based on the internal ID of the business partner to be considered. Specification of the business partner's external ID is also possible, but in this case the external ID has to be mapped to the corresponding internal ID (see notes on SAP implementation).

The response message returns the following balance items:

Error Handling

Typical errors that may occur with this operation are:

- No business partner ID is specified in the query
- The business partner ID specified in the query is invalid

Message Types

- ContractAccountAccountBalanceByCustomerQuery
- ContractAccountAccountBalanceByCustomerResponse

Prerequisites

The user has to have the required authorization to access the account balances for the specified contract accounts.

Notes on SAP Implementation

Prerequisites

You are using software component FI-CA (as of version FI-CA 6.02).

You have maintained the backend configuration of [SAP Biller Direct](#) in FI-CA (see Customizing for [Contract Accounts Receivable and Payable](#) under [Integration -> Financial Supply Chain Management -> Biller Direct -> Basic Setting for Customer Portal in Internet](#)). Note that since this operation is based on the functions of [SAP Biller Direct](#) , its use is subject to the same license conditions.

The user has sufficient authorizations, in particular with regard to authorization object F_KK_EBPP.

Processing

If an external business partner ID is specified in the query, it has to be mapped to the corresponding internal business partner ID. This mapping is carried out based on the definition of event 6600.

More Information

For information about corrections and frequently asked questions relating to this service, refer to SAP Note 1063631 (collective note) .

Find Contract Account Receivables Payables Register Item by ID

Definition

To find the register items of a contract account based on various selection criteria.

Technical Data

Release State	released
Technical Name	ContractAccountERPReceivablesPayablesRegisterItemByIDQueryResponse_In
Namespace	http://sap.com/xi/FICA/Global 
Application Component	FI-CA
Web Service Definition (Back End)	ECC_CONTACC_ITEM_BYID_QR
Direction	inbound
Mode	synchronous
Idempotency	no
Change/Update Behavior	not applicable
P2P Communication Enabled	true

Business Context and Use

The inbound operation **Find Contract Account Receivables Payables Register Item by ID** returns the items of a contract account according to specified selection criteria.

Related Operations

The operations [Find Contract Account Split Item Group by Business Partner ID](#) and [Find Contract Account Split Item Group by Elements](#) can be used to return the items of a contract account based on other selection criteria.

You can use the operation [Create Payment Directive](#) to assign SplitItems to a PaymentDirective and thus release them for collection by the corresponding payment run. The released SplitItems are grouped together if they are set to be paid by the same payment method.

The current operation returns items posted in FI-CA. To find items posted in FI-AR, you can use the operation [Find Trade Receivables Payables Account Split Item Group by Customer ID](#) which belongs to the process component Due Item Processing. The corresponding message structures are very similar to the message structures used in the current operation.

Features

The selection of contract accounts can be based on various criteria, including

- external contract account ID
- business partner IDs
- company codes to be read
- item clearing status
- a range of posting dates
- earliest clearing date and latest due date (which an associated document must have in order to be included in the selection).

The corresponding data elements in SAP S/4HANA are:

- Items: OPBEL + OPUPW + OPUPK
- SplitItems: OPUPZ

Note that in the FI-CA backend a cleared SplitItem always points to its clearing document, whereas in the message structure the cleared SplitItem always points to the payment or credit memo that cleared it.

Message Types

- ContractAccountERPReceivablesPayablesRegisterItemByIDQuery_sync
- ContractAccountERPReceivablesPayablesRegisterItemByIDResponse_sync

Constraints

In case invoices have been partially cleared by payments in other currencies, errors may occur when you display the partial amounts of the invoices.

Notes on SAP Implementation

Prerequisites

You are using software component FI-CA (as of version FI-CA 6.02).

You have maintained the backend configuration of [SAP Biller Direct](#) in FI-CA (see Customizing for [Contract Accounts Receivable and Payable](#) under [Integration -> Financial Supply Chain Management -> Biller Direct -> Basic Setting for Customer Portal in Internet](#)).

The user has sufficient authorizations, in particular with regard to the authorization object F_KK_EBPP.

Processing

FI-CA event 6607 is called directly after inbound mapping of the service is done; it can be used to modify the query fields before the business logic is performed.

FI-CA event 6608 is called before the response message is returned to the service consumer; it can be used to modify the response fields and to handle customer extensions carried out in the service interface

FI-CA event 6600 can be used to map an external contract account ID to the internal contract account ID.

More Information

For information on corrections and frequently asked questions relating to this operation, refer to SAP Note 1063631 (collective note).

Find Contract Account Split Item Group by Business Partner ID

Technical Data

Entity Type	Service Operation
Release State	released
Technical Name	ContractAccountERPSplitItemGroupByBusinessPartnerIDQueryResponse_In
Namespace	http://sap.com/xi/FICA/Global 
Application Component	FI-CA
Web Service Definition (Back End)	ECC_CONTACC_SP_ITEM_GRP_BYBPQR
Direction	inbound
Mode	synchronous
Idempotency	no
Change/Update Behavior	not applicable
P2P Communication Enabled	true

Business Context and Use

The inbound operation **Find Contract Account Split Item Group by Business Partner ID** returns the items of one or more contract accounts of a business partner according to specified selection criteria. The items are grouped with reference to the original invoice.

See the Features section for a description of the available selection criteria and the returned fields.

Related Operations

The inbound operations [Find Contract Account Receivables Payables Register Item by ID](#) and [Find Contract Account Split Item Group by Elements](#) return the items of a contract account based on other selection criteria.

You can use the operation [Create Payment Directive](#) to assign SplitItems to a PaymentDirective and thus release them for collection by the corresponding payment run. The released SplitItems are grouped together if they are set to be paid by the same payment method.

Features

This operation returns the Items and SplitItems of a contract account for a specified business partner. Each Item, comprising one or more SplitItems, may be open or cleared, or may contain a combination of open and cleared (subordinate) SplitItems.

The corresponding data elements in SAP S/4HANA are:

- Items: OPBEL + OPUPW + OPUPK
- SplitItems: OPUPZ

Note that in the FI-CA back end a cleared split item always points to its clearing document, whereas in this message structure the

to the customer and explaining how items were cleared. Each SplitItem belongs to a SplitItemGroup. Open SplitItems of an Item are grouped by due date and cash discount terms. So all the SplitItems of a given Item that are due on the same date and have the same cash discount percentage and cash discount dates belong to the same group.

Message Types

- ContractAccountERPSPplitItemGroupByBusinessPartnerIDQuery_sync
- ContractAccountERPSPplitItemGroupByBusinessPartnerIDResponse_sync

Constraints

In case invoices have been partially cleared by payments in other currencies, errors may occur when you display the partial amounts of the invoices.

Notes on SAP Implementation

Prerequisites

You are using software component FI-CA (as of version FI-CA 6.02).

You have maintained the backend configuration of [SAP Biller Direct](#) in FI-CA (see Customizing for [Contract Accounts Receivable and Payable](#) under [Integration -> Financial Supply Chain Management -> Biller Direct -> Basic Setting for Customer Portal in Internet](#)).

The user has sufficient authorizations, in particular with regard to the authorization object F_KK_EBPP.

Processing

FI-CA event 6601is called directly after inbound mapping of the service is done; it can be used to modify the query fields before the business logic is performed.

FI-CA event 6602 is called before the response message is returned to the service consumer; it can be used to modify the response fields and to handle customer extensions carried out in the service interface.

More Information

For information on corrections and frequently asked questions relating to this operation, refer to SAP Note 1063500 (collective note).

Find Contract Account by Business Partner

Definition

The service performs a query for all Contract Accounts assigned to a Business Partner.

Technical Data

Entity Type	Service Operation
Release State	not defined
Technical Name	ContractAccountERPByBusinessPartnerQueryResponse_In
Namespace	http://sap.com/xi/FICA/Global2 
Application Component	FI-CA
Web Service Definition (Back End)	FKK_CONTRACCTBYBPQR
Category	A2X
Direction	inbound
Mode	synchronous
Idempotency	no
Change/Update Behavior	not applicable
P2P Communication Enabled	true

Features

When this operation is executed, the Contract Accounts that are related to the provided Business Partner Internal ID are retrieved. A Business Partner Internal ID is mandatory; if you do not provide one, you will receive an error message and no results will be returned.

Error Handling

If you do not enter a Business Partner Internal ID , you will receive an error.

No Contract Account will be found if you enter an invalid Business Partner Internal ID. **Note** : Users should have the proper authorization in order to display Contract Accounts.

Message Types

- ContractAccountERPByBusinessPartnerQuery_sync
- ContractAccountERPByBusinessPartnerResponse_sync

Prerequisites

To use this service operation, the FI-CA application component should be implemented.

Notes on SAP Implementation

Switch Framework: Any business function set that includes an activated FICA switch via related business functions can use this service.

Configuration:

The operation is suitable for the following sectors in particular: Contract A/R and A/P, Industry Extension Public Sector, Insurance, SAP Media, Telco and Utilities. However, it is necessary that the customer runs the FI-CA application component in order to use it.

Note : Users must have the proper authorization in order to display a Contract Account (authorization object F_KKVK_BEG).

Enhancements:

Events are defined for additional function modules that can be called as customer exits for defining specific inbound/outbound application mapping logic.

- For inbound mapping:
 - Event 4604
 - FICA Services: Inbound XI Mapping ContractAccountByBPId
 - Sample module: FKK_SAMPLE_4604 in function group FKK_XI_EVENTS
- For outbound mapping:
 - Event 4605
 - FICA Services: Outbound XI Mapping ContractAccountByBPId
