Analyze Incoming Payments

With the **Analyze Incoming Payments** (F5588) app, you can monitor and analyze incoming payments to optimize clarification processes and team workload.

Key Features

You can use this app to regularly do the following:

- Analyze how many payments have been clarified manually within a given period.
- Analyze the effectiveness of the automated clarification process provided by the standard.

i Note

If you have licensed and are using SAP Cash Application, add-on for contract accounting, you can regularly validate the effectiveness of the applied machine learning to the clarification process.

You display the data per company code. You can refine the filter criteria as required by choosing **Adapt Filters** to include, for example, the posting date, and lot type.

The app analyzes payment lots, credit lots, and check lots, and displays an overview of which amount and number of payments in a payment lot has been cleared automatically or manually.

i Note

If you are using SAP Cash Application, add-on for contract accounting, the app analyzes payment lots, credit lots, and check lots, and displays an overview of which amount and number of payments in a payment lot has been cleared using machine learning.

Views

You can display the data by using the following view options:

- The **Chart View** shows all payment lots matching the filter criteria.

The default dimension is **Lot**. The default measures are **Payments in Clarification**, **Payments Posted Automatically**, **Payments Posted Manually**, and, if you are using SAP Cash Application, add-on for contract accounting, **Payments Posted Using Cash App**.

- The **Table View** lists more details per payment lot than the **Chart View**, including the total number of payments in clarification, the total number of items in lots, and the total payment amount in the last row of the table.

You can combine the table and chart view in a single display.

For each view, you can change chart, dimensions, and measures in the **Settings** dialog. You change the display by selecting a chart type in combination with a dimension and measures.

The details view of individual payment lots shows various statistics, such as the following:

- Payment usage within a payment lot
- Duration of clarification activities
- Level of automation within one payment lot

i Note

If you are using SAP Cash Application, add-on for contract accounting, the details view of individual payment lots shows the proposal rate.

Examples for How to Configure Views

To display the total payment amount in relation to the open payment amount in a lot, select the following:

- **Chart: Combined Stacked Line Chart**
- **Dimension: Lot**
- **Measure: Amount of Open Items**
- **Measure: Total Payment Amount**

To display the total amount in relation to the number of items in a lot, select the following:

- **Chart: Combined Column Line Chart with 2 Y-Axes**
- **Dimension: Lot**
- **Measure: Number of Items in Lot / Axis 1**
- **Measure: Total Payment Amount / Axis 2**

To display percentages, select the following:

- **Chart: 100% Stacked Column Chart**
- **Dimension: House Bank**
- **Measure: Payments in Clarification**
- **Measure: Payments Posted Manually**
- **Measure: Payments Posted Automatically**

SAP Fiori Implementation Information

In the SAP Fiori Apps Reference Library, see the details for the [Analyze Incoming Payments](#) app.
